

1. Executive Summary

My analysis found that UVA received approximately \$22.2 million in foreign funding across 98 records. UVA's average gift was about \$226,421, while the median was about \$80,536, which shows that some larger gifts raise the average. Compared with the selected public research university peers, UVA received the lowest total amount of foreign funding. UVA also ranked 101st out of 318 institutions by total foreign funding and 57th by number of gifts. Based on these findings, I recommend that UVA target countries that already provide substantial funding to similar universities but currently have no reported funding to UVA. China appears to be the strongest opportunity, followed by Germany, Canada, Hong Kong, and Saudi Arabia. UVA should also continue developing its existing relationships with countries such as Bangladesh and Sweden.

2. Overall Giving and Giving to UVA

When I compared UVA with the overall market, I found that the dataset contains 318 institutions. The average institution received about \$52.2 million in total foreign funding, while the median institution received about \$6.49 million. UVA's total of about \$22.2 million falls below the average but above the median. UVA ranked 101st by total amount received and 57th by number of gifts. I also compared UVA with a group of similar public research universities, and UVA had the lowest total foreign funding among the selected peers. This suggests that UVA has room to increase its foreign funding compared with both the overall market and similar universities.

Looking more closely at UVA, I found 98 foreign funding records totaling \$22,189,238. The average amount was about \$226,421, while the median was about \$80,536. The difference between these values suggests that a smaller number of large gifts increase the average. Bangladesh was UVA's largest source by total amount at about \$4.23 million, followed by Sweden at about \$4.01 million. England had the highest number of UVA records with 31, but its total amount was about \$1.95 million. This shows that receiving gifts more frequently does not necessarily mean receiving the most money overall.

3. Strategy for Finding New Potential Sources of Money for UVA

My strategy for finding new sources of foreign funding would be to look for countries that already give significant amounts of money to the overall U.S. university market and to UVA's selected peer institutions but currently have no reported funding to UVA. I think this is a useful approach because these countries have already shown that they are willing to provide substantial funding to universities similar to UVA. UVA could focus its fundraising efforts on countries where there is already evidence of strong financial relationships with U.S. higher education.

China appears to be the strongest potential new market. It provided about \$1.24 billion to institutions in the overall dataset and about \$93.6 million to UVA's selected peers, while UVA received no reported funding from China. Germany is another strong opportunity, with about

\$442.5 million in overall funding and \$56.6 million to UVA's peers. Canada provided about \$898.2 million overall and \$51.4 million to the peers, while Hong Kong provided about \$887.4 million overall and \$51.2 million to the peers. Saudi Arabia also stands out, with more than \$1.06 billion in overall funding and about \$50.1 million given to UVA's peers. None of these five countries had reported funding to UVA in the dataset. Because of this, I would prioritize China, Germany, Canada, Hong Kong, and Saudi Arabia while also continuing to strengthen UVA's existing relationships with Bangladesh and Sweden.

4. Conclusion

Overall, I think UVA has good prospects for increasing its foreign giving because the analysis shows several areas where it could expand. UVA currently receives less total foreign funding than the selected peer universities, but several countries already provide large amounts of money to those peers without providing any reported funding to UVA. This gives UVA clear potential markets to pursue, especially China, Germany, Canada, Hong Kong, and Saudi Arabia. At the same time, UVA already has successful relationships with countries such as Bangladesh and Sweden that could be developed further. By combining new outreach with stronger existing relationships, UVA has a clear path toward increasing its foreign funding.
